The European Synchrotron and FEL user organization (ESUO): a brief introduction

Monday, 5 September 2022 17:00 (10 minutes)

ESUO, the European Synchrotron and FEL user organization, was founded in 2010 as a body to represent all European photon science users. Today, ESUO is a legal entity that represents about 30 000 users from 31 European member states and European associated countries. The mission of the organization is supporting a thriving European synchrotron and FEL user community with equal opportunities of access and participation for all scientists based solely on the scientific merit of their ideas. Different activities to support needs of users, to increase collaboration, cooperation and lobbying, and to establish an ESUO advocate network through national user delegates are being addressed.

Would you like to participate in the Poster Prize competition?

No
