ESRF-EBS Status

Tuesday, 14 September 2021 14:25 (20 minutes)

The ESRF-Extremely Brilliant Source (ESRF-EBS) is the first-of-a-kind fourth-generation high-energy synchrotron. After only a 20-month shutdown, scientific users were back to carry out experiments with the new source. This talk gives an overview of the EBS status from its Accelerator Control Unit (ACU) point of view. It also offers the opportunity to present some of the projects currently under development.
